AI-POWERED EMAIL

AUTOMATION PLATFORM EASYWRITE.AI

Automate. Personalized. Send

TEAM Byte-Force

PROBLEM STATEMENT

College clubs and student organizers face difficulties in finding suitable sponsors, creating personalized sponsorship proposals, and managing follow-ups. Manual research is time-consuming, generic outreach messages often fail to communicate event value, and the lack of centralized tracking leads to missed opportunities and disorganized sponsor communication.

Key Challenges:

- Time-consuming sponsor research
- Ineffective, generic outreach messages
- Unorganized follow-ups and sponsor tracking

PROPOSED SOLUTION: EASYWRITE.AI

EasyWrite.AI is an AI-powered sponsorship assistant that simplifies the process of finding relevant sponsors, preparing personalized outreach, and managing sponsorship opportunities for college events.

Our Goal: Make campus sponsorship outreach smarter, faster, and more organized.

How It Works

1. Event Brief: Enter event details, audience, theme, and goals.
2. Sponsor Matching: Rank potential sponsors using a weighted fit-scoring algorithm.
3. Package Suggestions: Recommend sponsorship benefits aligned with sponsor goals.
4. AI-Powered Outreach: Generate personalized emails, LinkedIn/WhatsApp messages, and follow-ups.
5. Sponsor Pipeline: Track prospects from research and contact to negotiation and confirmation.

What Makes Us Unique?

- Explainable Fit Scores: Understand why a sponsor matches your event.
- Personalized Communication: Create outreach based on event details and sponsor relevance.
- End-to-End Workflow: Combine matching, package suggestions, outreach, and tracking in one platform.
- Human-Controlled Process: Review messages and manage communication without automatic email sending.

TECHNOLOGY STACK & AI ARCHITECTURE

The Technology Behind EasyWrite.AI

Technology Stack

- Frontend: HTML, CSS, JavaScript — interactive user interface.
- Backend: Python, FastAPI — handles requests and application logic.
- Data Validation: Pydantic — validates structured inputs and outputs.
- Database: SQLite — stores event details and sponsorship pipeline data.
- Sponsor Matching: Python-based weighted scoring algorithm.
- AI Engine: Gemma 4 through a dedicated model adapter for sponsor-fit explanations and personalized outreach generation.

How the System Works

1. User Input: The organizer enters event details.
2. Backend Processing: FastAPI validates the request and coordinates the workflow.
3. Sponsor Scoring: The matching algorithm ranks sponsors based on relevance.
4. AI Generation: The AI component helps explain sponsor fit and draft personalized messages.
5. Storage & Results: Validated results are displayed to the user, while relevant records are stored in SQLite.

Key Highlight: A modular architecture combining rule-based sponsor matching, AI-assisted writing, and centralized sponsorship tracking.

MARKETING STRATEGY & REVENUE MODEL

Marketing Strategy & Revenue Model

Marketing Strategy — How We Reach Users

- Campus Partnerships: Collaborate with college clubs, student councils, and event organizers.
- Social Media Promotion: Showcase EasyWrite.AI through LinkedIn, Instagram, and student communities.
- Live Demonstrations: Demonstrate sponsor matching and personalized outreach at college events and hackathons.
- Referral Program: Encourage student organizers to introduce the platform to other clubs and colleges.

Revenue Model — How We Can Earn

- Freemium Model: Offer basic sponsor matching and limited outreach drafts for free.
- Premium Subscription: Provide advanced matching, more events, and expanded outreach features.
- Institutional Plans: Offer customized access to colleges, student organizations, and event management teams.

Growth Strategy

Start with campus clubs, gather user feedback, improve the platform, and expand to more colleges and student communities.

Our Vision: Make effective sponsorship management accessible to every campus community.

CHALLENGES, FUTURE SCOPE & VISION

Building the Future of Campus Sponsorships

Key Challenges & Our Approach

- Limited Sponsor Data: Maintain and regularly update sponsor records to improve matching relevance.
- AI-Generated Inaccuracies: Validate outputs and avoid unsupported claims in sponsorship messages.
- Uncertain Sponsor Fit: Use transparent, weighted scoring to guide decisions rather than guarantee sponsorship success.
- Missed Follow-Ups: Organize sponsor conversations through a centralized pipeline.

Future Scope

- Poster & PDF Parsing: Automatically extract event details from uploaded documents.
- Proposal Export: Generate professional sponsorship proposals as PDFs.
- Smart Negotiation: Compare sponsor counteroffers and package options.
- Multilingual Outreach: Create messages in multiple languages.
- Team Collaboration: Add team accounts, reminders, and advanced analytics.

Our Vision

To make sponsorship discovery and outreach smarter, simpler, and more accessible for every college club.

THANK YOU
